UNDER EMBARGO UNTIL MONDAY, JUNE 25, 2012 at 9 a.m. PT/12 pm. ET

## Trans-code Design Integrates with Box OneCloud to Help Companies Take Mobile Document Scanning to the Cloud.

*Premier mobile scanning solution now available with streamlined connection to cloud storage and app ecosystem.*

**BUFFALO, NY - June 25th, 2012** - Trans-code Design, creator of professional document scanning products for mobile devices, is integrating its flagship product, Droid Scan, with Box OneCloud.

Box and Droid Scan users who already share documents between Droid Scan and Box will benefit from the streamlined workflow provided by OneCloud, which will enable them to process their existing cloud documents using the proven technology in Droid Scan and move new documents created with Droid Scan quickly and securely by Box.

Users who are new to either technology will discover entirely new ways to exploit the power of connected mobile devices. Steve Jungels, lead developer at Trans-code Design says: “Cloud storage and mobile document processing are complementary technologies. By creating a secure and efficient bridge between these technologies, as well as a system for app discovery, OneCloud will help mobile users discover untapped capabilities of the devices they use every day.”

About Trans-code Design: Trans-code Design was founded in 2009 to explore transitional technologies that use code to transform our world. Trans-code Design has expertise in key strategic technologies including image processing and the Android and iOS mobile platforms.
